The rejection of the claims under 35 USC 112 has been withdrawn.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-44, 47 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Woldhuis (EP 0403030) in view of Rossman (2,109,093).

Woldhuis discloses a coating for cheese made of wax and a wax-like fat of the composition of the claims (abstract, page 3, lines 5-23 and claims 1-2). The composition was applied to cheese and found to prevent or reduce the movement of water from the product (page 3, lines 24-32). Wax sources applied are shown in the Tables. Both short and long-chained fatty acids are esterified to the glycerol of the molecule in the chain-length specified by the claims. Although branched fatty acids are not mentioned, it would have been obvious to expect branched and straight chain fatty acids to be included in a fatty acid of a chain length of more than 4. Although the molar ratio of ingredients of claims 17-21 is not mentioned, the ratio would have been expected from the triglyceride description at

page 3, lines 15-18. It is appreciated that the interesterification method by which the fat is made is not mentioned in the reference, but the claims are directed to the product and not to the method by which it is made. Further one of ordinary skill in the art would have expected a triglyceride containing a lot of short-chain fatty acids would have been made by interesterification because this type of triglyceride is not typically found in nature. The claims appear to differ from Woldhuis in the use of the coated cheese product in a multi-component foodstuff. Rossman teaches prepackaged cheese slices packaged together in a commercial unit. The cheese slices and the cheese wrapper are coated with the same packaging material that is made from a wax composition. With the reference of Rossman before him, it would have been obvious to one of ordinary skill in the art to prepackage multiple cheese slices together to form a multi-component foodstuff.

Applicant argues that the consumer may not wish to consume the waxy moisture coating in Woldhuis but the barrier composition of Woldhuis appears to be the same as the coating composition in Woldhuis. Applicant refers to a dessert composition but the claims are not related to desserts. Applicants' declaration and arguments are sufficient to overcome the rejections over the secondary references to Gaonkar, Smith and Loh.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
